Support

Support for this plug-in is ONLY available at http://www.keal.me.uk

Installation

This plugin should be installed in the usual way using the e107 plug-in manager. It has been tested with 0.7x. I can make no guarantee that it will work with any other version of e107. Make sure that the photos directory is writable.

UPGRADE

Delete all the files in the plugin folder and copy the new files in. This is because some files are no longer required and others have changed their name. Check with integrity checker and with database checker that all is well. There may be a problem with older versions (pre .76) of e107 in detecting the new e_module and e_notify actions. They should register if you uninstall and reinstall. *Note though that this will delete your existing data.*

About Version 1.6
Added clear button to the name field

About version 1.5
Added the ability to show a picture

About Version 1.4
Added the facility to attach a photo to the person's record. Changed the notify method to use the e107 notify process (see e107 admin notify). Tidied up some code. Although you can set the size of the photo (in px or %) it only changes the display size. It doesn't resample the image so don't upload big photos. Ideally you should create the pictures at the size you want then set the config to suit.

About version 1.3
Fixed some issues with categories and pdf.

<u>About version 1.1</u>

Substantial changes made to the table structures. Fixed a number of issues/bugs. More selectable options. Made XHTML 1.1 compliant.

Uses the pdf library now included in version 0.7. Added it to e107 search routine for first name or last name. Got rid of most of hard coded text.

Just for Info

I use PDFCreator from http://sourceforge.net/projects/pdfcreator/ as the PDF creator, a great free and comprehensive utility.

For editing I use PHP Edit from http://www.waterproof.fr/
