Support

Support for this plug-in is ONLY available at http://www.keal.me.uk

Installation

This plugin should be installed in the usual way using the e107 plug-in manager. It has been tested with version .77. I can make no guarantee that it will work with any other version of e107. If you want pictures uploading check the permissions on the images/pictures folder. Must be read/write (chmod777 for example)

Drop the recipe_menu folder into the 107 plugins folder and go to the plugin manager and install it.

Go to configuration and configure the plug-in. You will also need to create recipe categories and recipes. If you want the menu shown go to menus in the main admin area and activate it. Don't forget to check filetype.php in the e107 admin directory (see e107 documentation).

Upgrading

When upgrading any plugin of mine do an integrity check, a database validity check and scan plugin directories check after you have done the upgrade with plugin manager.

Version 2.09

Added PDF support (if pdf plugin installed)
Added recipe stats
Enhanced the top recipe menu (also supports e107 cache if installed)

Version 2.08

Fixed error with displaying names with a . in them. Thanks to Jurko for supplying the fixes for that, much appreciated.
Fixed language error in user administering recipes

Version 2.07

Categories can now have icons. These should be 32x32 and live in the images/caticons directory.

All categories is now an option in the selector.
Users can now administer their own recipes.
Auto approve class for automatically approving recipes

Version 2.06
Added the option to turn of rating and added comments. Also you can now specify the number of decimal places in the rating uses php number_format function).

After upgrading check the config.

Version 2.05
Added top rated menu and fixed a bug displaying apostrophes.

About versions 2.01 - 2.04

Fixed a couple of bug, admin can define the default sort order on entering the recipes display. An optional banner is displayed. If you don't want it delete or rename banner.png in the images directory.

About version 2.00

Fixed SQL code for displaying recipes by 'name'
Fixed SQL code for displaying recipes by 'posted by'
Added Author
Added Servings
Added Preparation Time
Added Nutritional Information
Added email reply to settings

Grateful thanks go to Ben at foodisfunagain.com for these modifications.
http://www.foodisfunagain.com is a food allergy site dedicated to the US 'Major 8' allergies

If you like the modifications, go enter an allergy safe recipe there.

Database fields have been updated. Make sure you backup your current database before upgrading.

Run upgrade from plug-in manager to update the database tables and preferences.

About version 1.03

Fixed a couple of little bugs and added email facility. Most of the work was in getting it ready for v7. Now displays info in the admin main page on status and pending recipes.

About version 1.02

Fixed a couple of minor bugs and made xhtml compliant.

About version 1.01

The recipes menu allows you to have some humour on your web site. Access can be restricted to a certain user class. You can specify who can submit new recipes which are then saved but not made active. The administrator can review the recipes and approve or delete them as required.

Recipes are displayed by category and can be sorted on recipe name, poster's name or date posted. Recipe method and ingredients can use bbcode although the email does not send BBCode because of the way e107 handles it. Logged in members can rate the recipe.

Just for Info

I use PDFCreator from http://sourceforge.net/projects/pdfcreator/ as the PDF creator, a great free and comprehensive utility, even works on servers (Windoze of course)

For editing I use PHP Edit from http://www.waterproof.fr/
